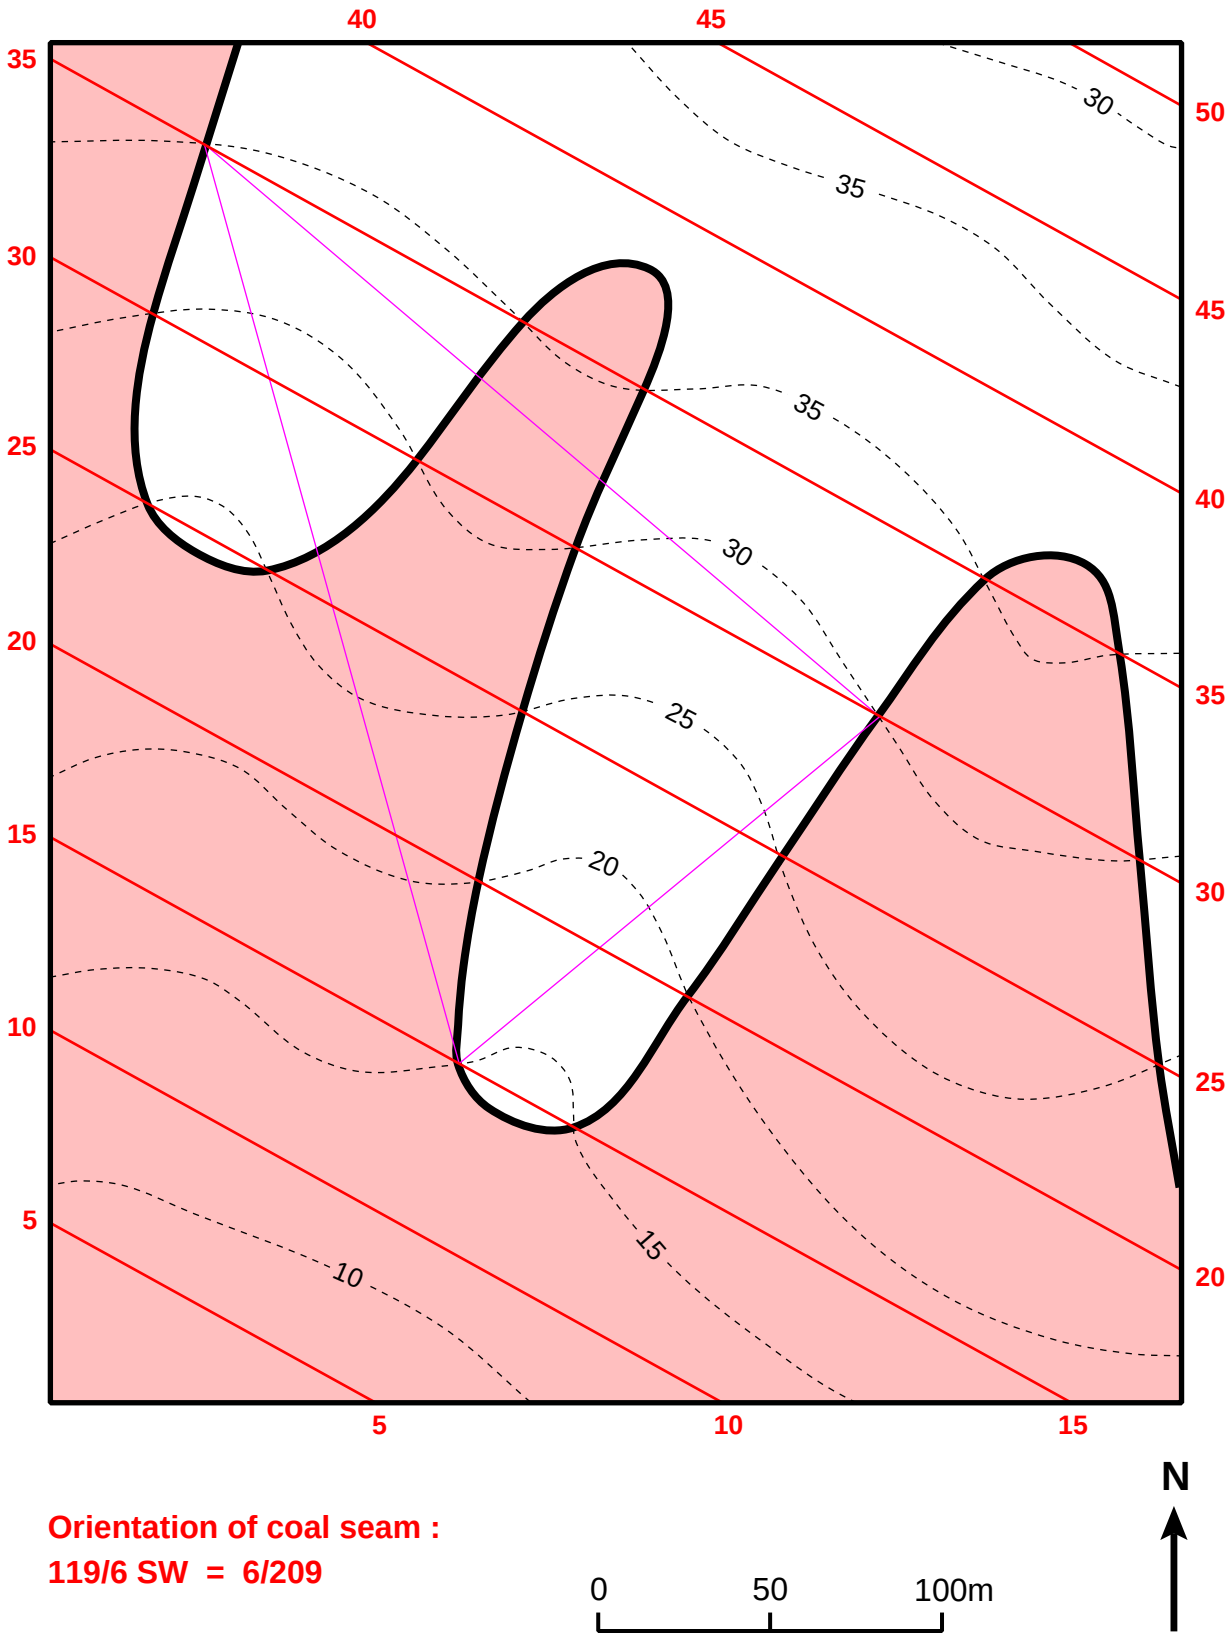
THE ORIENTATION OF SURFACES (1)

4. Completing a map given the position of contacts

The map below shows a hillside contoured at 5 m intervals and three locations where a seam of coal is exposed. Complete the location of the remainder of the seam outcrop assuming that it dips uniformly across the area covered by the map. Shade the area which lies above the seam. State the strike/dip and dip/dip direction of the coal seam.



Orientation of coal seam :
119/6 SW = 6/209
