POLICE LABORATORY REPORT ON SEDIMENT SAMPLES OBTAINED FROM SUSPECT 1

Suspect One – Professor David Schultz

Dave claims to have been four-wheel driving in the mountains of Snowdonia at the time of the murder. He wanted to observe the weather patterns. He returned to camp shortly after 1700.

Sediment samples collected from:

• car wheels. [Samples occurred in the tyre tread in the following order, from inside to outside, S1A, S1B, S1C].

• inside the vehicle [S1D]

• the mountain area where the suspect claims to have been [S1E Sample S1A Weathered granite; Sample S1E granite: BNG 265901 368032

Small pieces of *Erica cinerea* were also found inside the car

Sample Descriptions:

You have been given the descriptions for S1B and S1D – you need to write the description for S1C

	Sample S1B	Sample S1C	Sample S1D
Grain shape	Mineral grains: spherical to subspherical Shelly material: Variable – plates, rods, subspherical Rock (lithic) grains: subspherical , platey		Mineral grains: subspherical Shelly material: platey Rock (lithic) grains: subsphericalplatey
Angularity	Shelly material: rounded-well rounded Quartz: subangular-subrounded		v.angular-subangular
Composition	50% quartz 48% shelly material incl. in order of relative abundance: shell fragments (bivalves and gastropods), whole gastropods (3 types), disarticulated bivalves, forams (2 types), bryozoa (2 types), echinoid spines (green and purple), and fish teeth. 2% basic igneous (including basalt) and metamorphosed basic intrusive igneous		40% shell fragments – occasional coralline algae 40% quartz 20% basic igneous (including gabbro) and metamorphosed basic intrusive igneous
Other observations	Polished shell fragments- high degree of abrasion		

Pieces of branched coralline algae of Mannin Bay. Width of view 6 cm.
