POLICE LABORATORY REPORT ON SEDIMENT SAMPLES OBTAINED FROM SUSPECT 4

Suspect Four – Dr Rob Sansom

Rob claims to have been collecting fossils and measuring fossil trackways at Location 4: BNG 318967 387442 in the morning. At about 1115 he returned to camp to change his clothes and shoes before walking to the pub to have lunch with friends. The landlord of the pub confirms that this suspect arrived at about midday and did not leave until shortly after 1745.

Additional evidence was collected from:

- Beach at Location 4 [S4A]
- Sediment in the tread of his trainers [S4B]
- The area around the pub [S4C]

A leaf from *Limonium britannicum* was found in his field bag

Sample Descriptions:

You have been given the descriptions for S4A and S4C – you need to write the description for S4B

	Sample S4A	Sample S4B	Sample S4C
Grain shape	Mineral grains: subspherical Shelly material: platey Rock (lithic) grains: subsphericalplatey	Population 1: Population 2:	Subsperical
Angularity	v.angular-subangular	Population 1: Population 2:	Very angular
Composition	40% shell fragments – occasional coralline algae 40% quartz 20% basic igneous (including gabbro) and metamorphosed basic intrusive igneous	Population 1: Population 2:	100% quartz
Other observations		Bimodal grain size population!!	Man made aggregates of quartz grains Fe oxide staining present
