EART28202 Structural Geology

GENERIC ASSESSMENT CRITERIA FOR FAULTS AND INTRUSIONS

Geometry of faults [20]

- Fully annotated stereogram only showing relevant information
  - Well presented with appropriate title **[1; mark lost if irrelevant information is present]**
  - Planes and slickensides (if given) used in the fault plane section construction with apparent dips/pitches indicated **[2]**
  - Strike/dip of fault plane highlighted **[1]**
  - Plunge/plunge direction of slip vector highlighted **[1]**
- Fault plane section
  - Well draughted with appropriately worded title, strike/dip of section plane, correct orientation indicators, scale bar **[3, marks lost for omissions]**
  - Apparent dips and pitches going the right way and labelled, accurate offsets **[2+1]**
  - Intelligibility: FW/HW distinguished/offset surfaces labelled, slip vector labelled with arrowhead/pitch/components **[1+3]**
- Numbers for slip vector
  - Slip vector magnitude **[1]**
  - Dip-slip component magnitude and sense **[1+1]**
  - Strike-slip component magnitude and sense **[1+1]**

Geometry of intrusions [5]

- Type of intrusion/comment on shape of contacts **[1]**
- Orientation of contacts **[1]**
- True thickness with evidence of calculation **[1]**
- Comment on opening direction **[2]**
