TWO DYKE EXERCISE

(1) Formation of the country rock

(2) Intrusion of pegmatite

Intrusion of a 10 m wide, parallel-sided, pegmatite dyke, 035/V

(3) Intrusion of dolerite (crosscuts the pegmatite and hence intruded after it)

Intrusion of a 6 m wide, parallel-sided, dolerite dyke, 085/V, with an opening direction normal to dyke margins

(4) Faulting (fault offsets dolerite and hence post-dates it)

Formation of oblique-slip fault, oriented 140/45NE, slip vector 30/105 and magnitude 57 m (40 m sinistral strike-slip, 40 m reverse dip-slip)

(5) Uplift and erosion to the present topography
