(after 2024)

St. Monans shore section (108/70 S)

Data projected down the plunge of F_1 (20/018) on to section plane

Map as presently drawn was created to get a detailed dataset of orientation readings around a real structure for teaching (stereonet) purposes. Yet to map properly:

- *Areas SW and E + SE of Davies Rock*
- *Sedimentary and igneous contacts (some spot locations shown)*
- *Internal details to igneous plugs, minor dykes*
- *Minor faults*

line of section

apparent dip of S_0 with younging direction

apparent dip of S_1

formation / member contacts

axial trace of F_1 antiform

axial trace of F_1 synform

Actually shown are dip lines (reading at centre of line)

Areas of igneous just show the areas where country rock information is unobtainable, not their presence at depth

(1:2500)

0 100 m

no topographic correction needed (wavecut platform):
