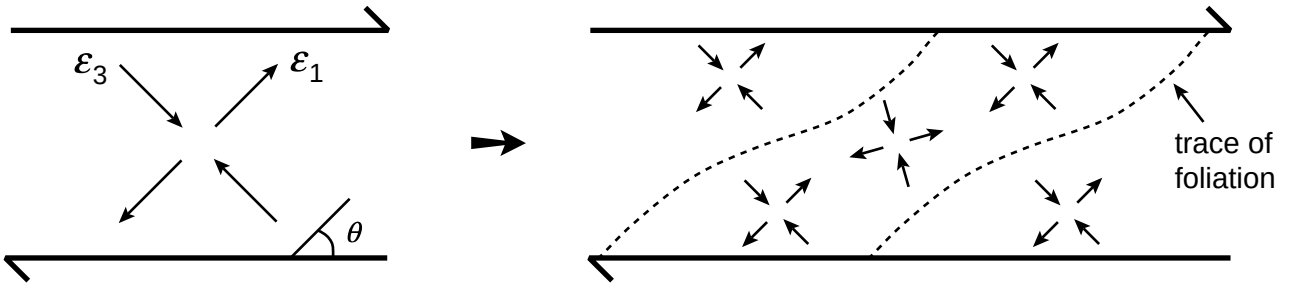
# CONGRUENT MINOR STRUCTURES IN SHEAR ZONES



Commonly, if $\theta \neq 45°$,

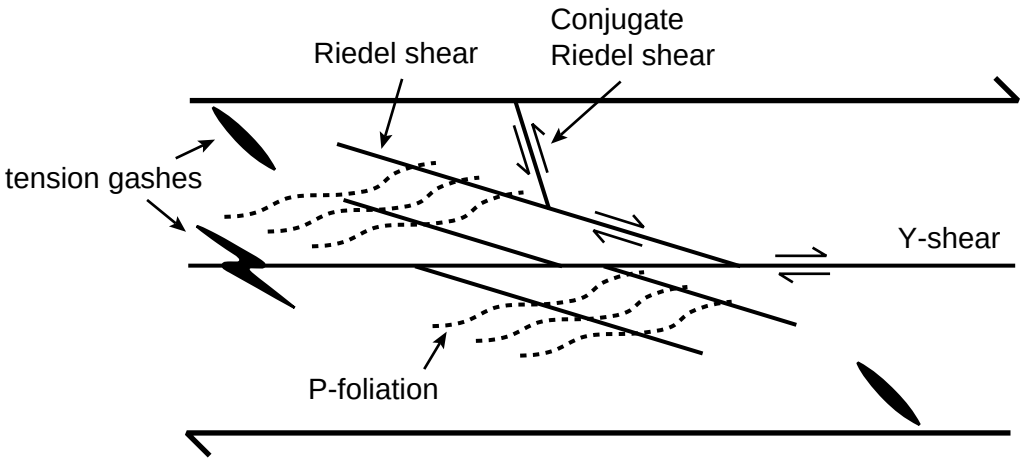
$\theta < 45°$ transpressive

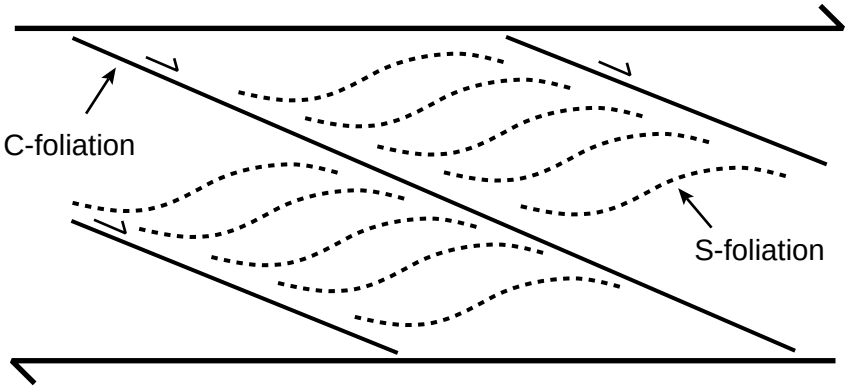
$\theta > 45°$ transtension

Primary foliation normal to $\varepsilon_3$ ; boudinage parallel to $\varepsilon_1$

Foliation / shear zone boundary intersection is normal to slip vector

## BRITTLE SHEAR ZONES





## DUCTILE SHEAR ZONES
