Stratum Contour Exercise 3

The map shows three exposures where the contacts between a number of mapping units have been observed. The stratigraphic sequence is shown below. It contains three conformable units (Units A, B, and C) dipping uniformly at 055/16 SE, which are separated by an uniformly dipping angular unconformity from a fourth unit (Unit D). The vertical thickness of Unit B is 150 m. Complete the map and determine the orientation of the unconformity.

Scale is 1:10000 ; contours are in metres

Units in correct stratigraphic order

unconformity: 097/6 N
