Faults: extra practice question 2

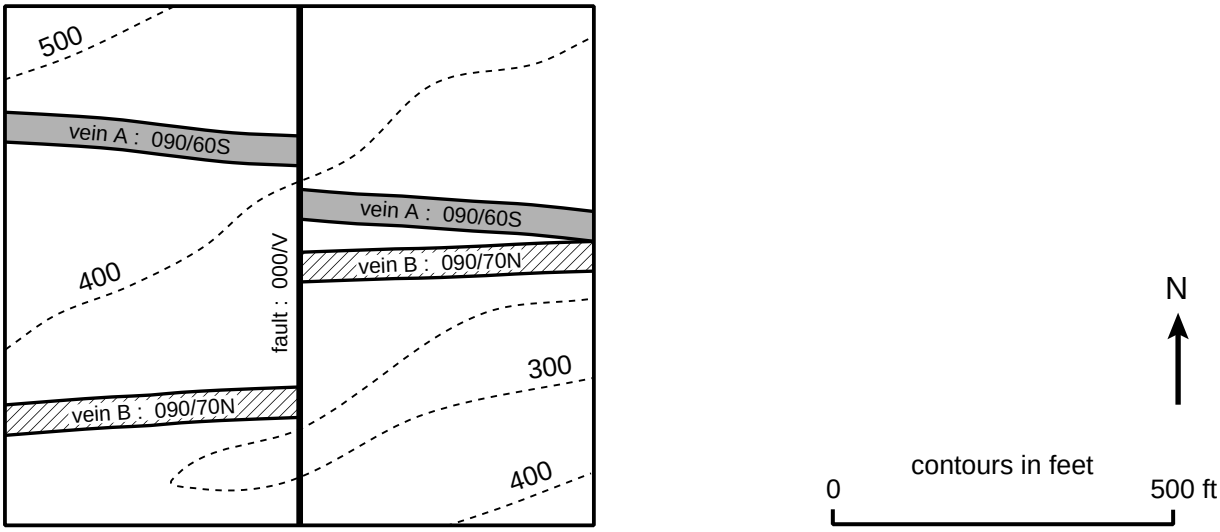
The map below shows two veins which have been offset by a vertical fault.

(a) Draw a fault plane section to illustrate the movement on the fault.

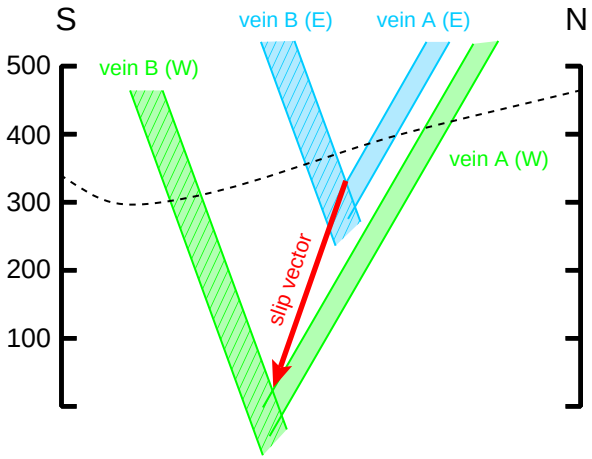
(c) What is the magnitude and sense (down to the west or down to the east) of the dip-slip component of the slip vector?

(d) What is the magnitude and sense (sinistral or dextral) of the strike-slip component of the slip vector?

(e) What is the plunge/plunge direction of the slip vector?



Fault plane section: 000/V



Fault: 000/V; slip vector 71/180 , 329 ft

Dip-slip: 311 ft (down to W)

Strike-slip: 107 ft (sinistral)
