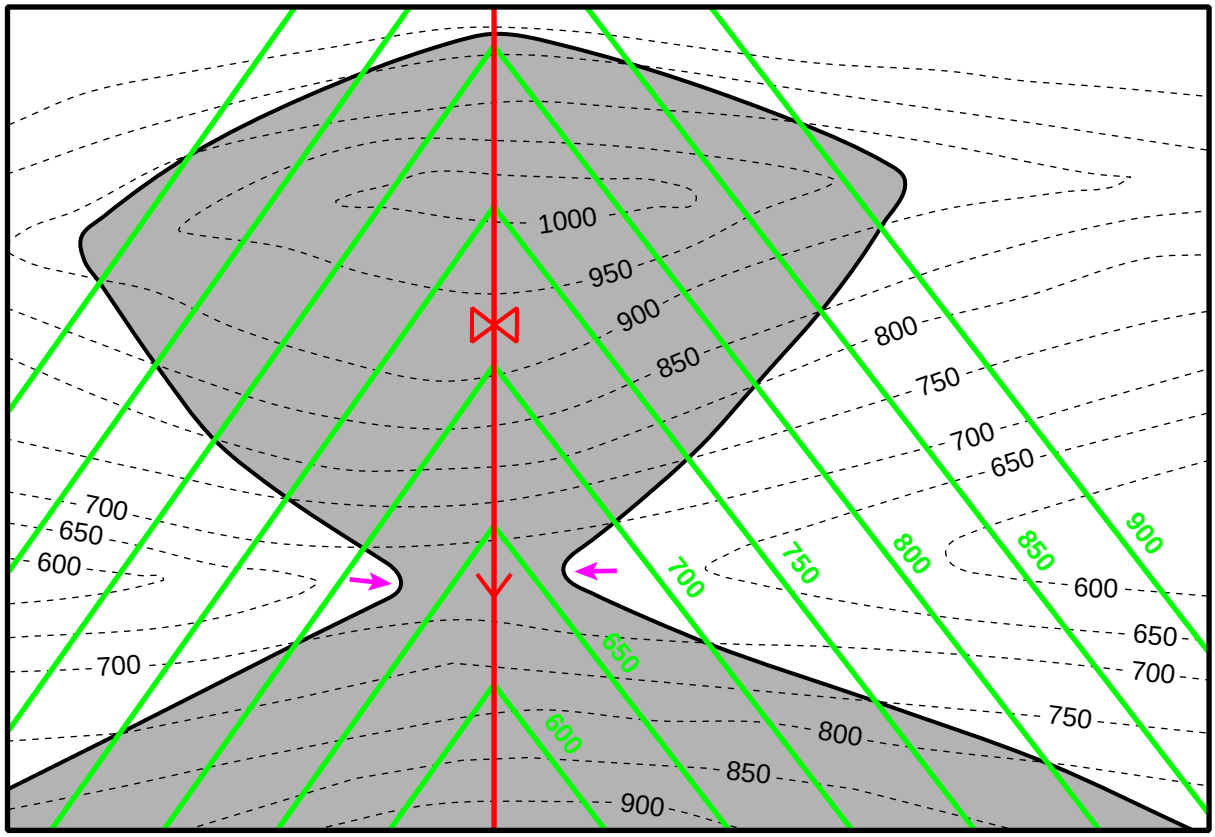
STRATUM CONTOURS ON FOLDS (1)

Example exercise

By drawing stratum contours on the contact between the mudstone and the grit, determine the geometry of the fold structure shown on the map below.

(a) Determine the strike/dip of each limb of the fold. Is the fold an antiform or a synform?
(b) Determine the plunge/plunge direction of the fold axis.
(c) Determine the strike/dip of the axial plane.



approximate dip direction given by veeing

Sandstone

Mudstone

N

0 1000 ft

Limbs : 142/7SW and 035/7SE
Fold axis : 4/180
Axial plane : 000/V
