FAULT EXERCISES

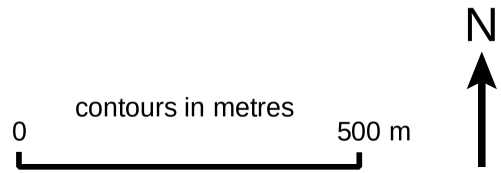

1. The maps below each show a purely dip-slip fault. On each map draw a vertical cross section parallel to the dip direction of the fault and determine the orientation of the fault and the orientation, magnitude, and movement sense of the slip vector

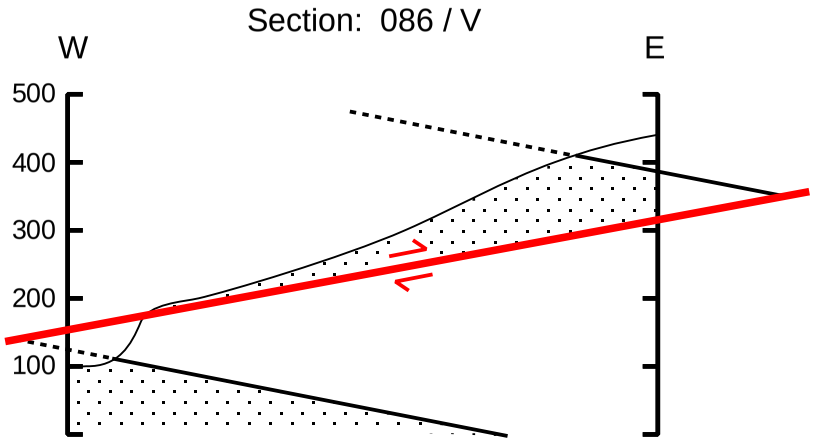

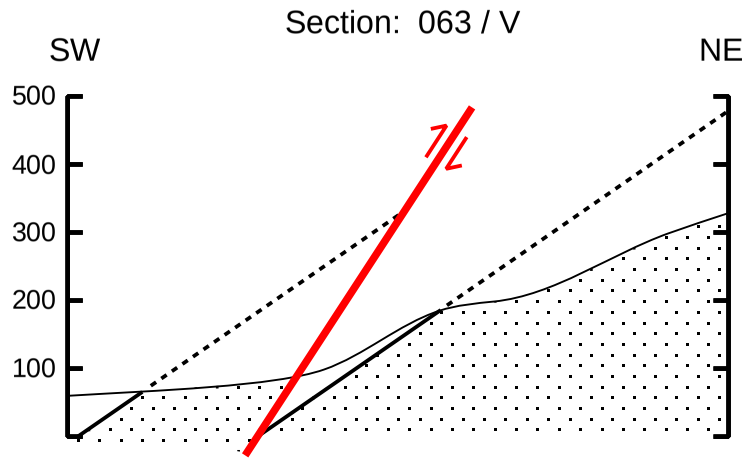

Fault: 176 / 11W ; slip vector: 11 / 266 , 1140 m
dip-slip: 1140 m (reverse) ; strike-slip: 0 m

Fault: 153 / 57SW ; slip vector: 57 / 243 , 383 m
dip-slip: 383 m (reverse) ; strike-slip: 0 m
