Barrême palaeocurrent data
(erosive features on the base of beds)

root frequency rose diagram

	mean	*variance*
BdE	357°	0.05
Lau	132°	0.05
Asse	288°	0.40
all	328°	0.83

Interpretative pointers

(1) Beware observer bias (more data from certain horizons or localities)

(2) Analyse the data by stratigraphic position (changing current directions with time)

(3) Analyse the data by locality (changing current directions with place), plotting the results on a map

(4) Bear in mind how the palaeocurrent indicator was formed
