Vertical cross-section along line A-B (135/V) on the Marlborough exercise

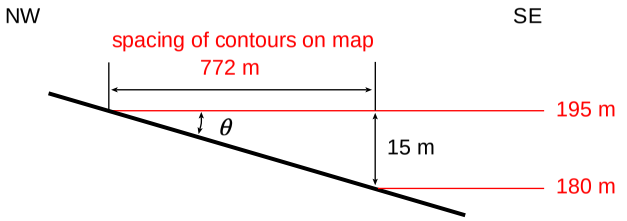

horizontal scale = 1:52360 (same scale as map)

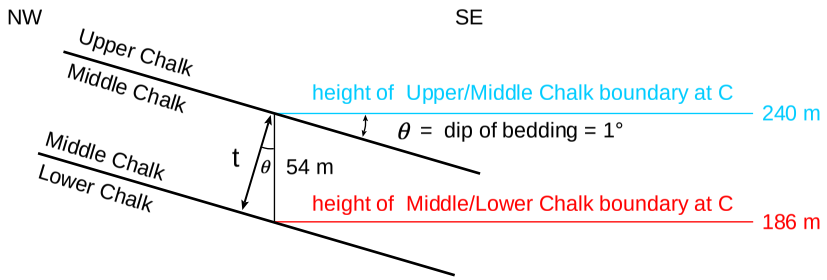

vertical scale = 1:10000 (hence vertical exaggeration 5.236)

At C

θ = dip of bedding = $\tan^{-1}(15 / 772)$ = 1°

Orientation of Lower / Middle Chalk boundary at C = 062 / 1 SE

t = thickness of Middle Chalk at C = 54 cos 1° = 53.99 m ≈ 50 m
